Wieland vacuum systems for indoor or outdoor shot-blasting applications are driven by Diesel engines or electric motors.

All systems are designed according to customer demand. Standard systems are available with a performance from 11 to 96 kW. Collected blasting material can be discharged into BigBags or into existing conveying systems.

Applications:

- Blasting material removal from scaffolds
- Recycling of blasting material
- Removal of blasting material from parts with cavities
- Cleaning of work areas
- Disposal of worn out blasting material
